

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1.(original): A bonding sheet comprising an adhesive layer containing a thermoplastic resin disposed on one side of a heat resistant film and a non-adhesive layer containing a non-thermoplastic resin and a thermoplastic resin disposed on the other side of the heat resistant film.

2.(original): The bonding sheet according to claim 1, wherein the ratio of the non-thermoplastic resin to the thermoplastic resin in the non-adhesive layer is 82/18 to 97/3 on a weight basis.

3.(currently amended): The bonding sheet according to claim 1-~~or~~2, wherein the heat resistant film is a polyimide film.

4. (currently amended): The bonding sheet according to ~~claims~~ claim 1 ~~to~~ 3, wherein the thermoplastic resin in the adhesive layer and the non-thermoplastic resin and the thermoplastic resin in the non-adhesive layer are polyimides.

5. (currently amended): The bonding sheet according to ~~claims~~ claim 1 ~~to~~ 4, wherein a rectangular piece having a width of 7 cm and a length of 20 cm taken from the bonding sheet exhibits a warpage of 0.5 mm or less at each of the four corners after being left to stand at 20°C and 60% R.H. for 12 hours.

6. (currently amended): The bonding sheet according to ~~claims~~ claim 1 ~~to~~ 5, wherein the linear expansion coefficient (200°C to 300°C) of the bonding sheet is in the range of  $\alpha_0 \pm 5$  (ppm/°C) wherein  $\alpha_0$  (ppm/°C) is a linear expansion coefficient (200°C to 300°C) of a metal foil to be bonded onto the bonding sheet.

7.(currently amended): A flexible one-side metal-clad laminate comprising a metal foil bonded onto the adhesive layer of the bonding sheet according to ~~claims~~ claim 1 to 6.

8.(original): The flexible one-side metal-clad laminate according to claim 7, wherein the metal foil is bonded onto the bonding sheet using a thermal roll laminator including at least one pair of metal rolls.

9.(currently amended): The flexible one-side metal-clad laminate according to claim 7 ~~or 8~~, wherein the metal foil is a copper foil.

10.(currently amended): The flexible one-side metal-clad laminate according to ~~claims~~ claim 7 to 9, wherein a rectangular piece having a width of 7 cm and a length of 20 cm taken from the flexible one-side metal-clad laminate exhibits a warpage of 1.0 mm or less at each of the four corners after being left to stand at 20°C and 60% R.H. for 12 hours.

11. (new): The bonding sheet according to claim 2, wherein the heat resistant film is a polyimide film.

12 (new): The bonding sheet according to claim 2, wherein the thermoplastic resin in the adhesive layer and the non-thermoplastic resin and the thermoplastic resin in the non-adhesive layer are polyimides.

13(new): The bonding sheet according to claim 3, wherein the thermoplastic resin in the adhesive layer and the non-thermoplastic resin and the thermoplastic resin in the non-adhesive layer are polyimides.

14(new): The bonding sheet according to claim 3, wherein a rectangular piece having a width of 7 cm and a length of 20 cm taken from the bonding sheet exhibits a warpage of 0.5 mm or less at each of the four corners after being left to stand at 20°C and 60% R.H. for 12 hours.

15(new): The bonding sheet according to claim 3, wherein the linear expansion coefficient (200°C to 300°C) of the bonding sheet is in the range of  $\alpha_0 \pm 5$  (ppm/°C) wherein  $\alpha_0$  (ppm/°C) is a linear expansion coefficient (200°C to 300°C) of a metal foil to be bonded onto the bonding sheet.

16(new): The bonding sheet according to claim 5, wherein the linear expansion coefficient (200°C to 300°C) of the bonding sheet is in the range of  $\alpha_0 \pm 5$  (ppm/°C) wherein  $\alpha_0$  (ppm/°C) is a linear expansion coefficient (200°C to 300°C) of a metal foil to be bonded onto the bonding sheet.

17(new): The bonding sheet according to claim 14, wherein the linear expansion coefficient (200°C to 300°C) of the bonding sheet is in the range of  $\alpha_0 \pm 5$  (ppm/°C) wherein  $\alpha_0$  (ppm/°C) is a linear expansion coefficient (200°C to 300°C) of a metal foil to be bonded onto the bonding sheet.

18(new): A flexible one-side metal-clad laminate comprising a metal foil bonded onto the adhesive layer of the bonding sheet according to claim 3.

19(new): The flexible one-side metal-clad laminate according to claim 18, wherein the metal foil is bonded onto the bonding sheet using a thermal roll laminator including at least one pair of metal rolls.
